Claim 4; Fig 1; 38pp; English.

The present sequence is that of human brain lysophospholipid-specific lysophospholipase (LysoPLA), a novel member of the K/L hydrolase family having a catalytic site composed of Ser-119, Asp-174 and His-208. LysoPLAs are critical enzymes that act on biological membranes to

```
regulate the multifunctional lysophospholipids; increased levels of lysophospholipids are associated with a host of diseases. The enzyme is widely distributed in almost all tissues, although levels vary. Lysopla cDMA (see AAH26336) was obtained by PCR amplification of human brain oDMA using primers (see AAH26337-38) based on human sequences identified by database screening using a mouse sequence. The PCR product was expressed in Escherichia coli BL21 (DE3) cells using vector pET38a(a). The recombinant LysoPlA protein, which included an N-terminal 6H1s tag and thrombin cleavage site, was recovered on an Ni-TMA column. Kinetic analysis showed that human LysoPlA displays apparent co-operativity and surface dilution kinetics. The recombinant LysoPlA can be used in the treatment of disease states having elevated concentrations of treatment of disease states having elevated concentrations of yerphythmia in myocardial ischaemia and segmental demyelination of operatives. The LysoPlA may be supplied to the enzyme-deficient patient by infusion or by gene therapy (both claimed). Also claimed is a method of inhibiting human brain LysoLPA activity using methyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present sequence is human lysophospholipase (NHLP). The present invention also describes a method for treating or preventing a disorder of cirrhosis, hepatitis. (e.g. arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease, myelofibrosis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thrombocytopania, and cancers), inflammation (e.g. Addison's disease, AlDS, allergies, aathma, atherosclerosis, bronchitis) and a disease, AlDS, allergies, athmune haemolytic anaemia) by administering an appraisably to NHLP. NHLP proteins, antagonists, antibodies, agonists, complementary sequences or vectors may be administered in combination with other therapeutic agente. Antibodies which specifically bind to NHLP with the disgnosis of disorders characterized by expression of NHLP or in assays to monitor patients being treated with NHLP or agonists. The polyvucleotides (PNS) encoding NHLP or fragments may be used therapeutically. In one aspect, the complement of the polyvucleotides may be used to madulate NHLP or complement of the polyvucleotides may be used to modulate NHLP or transcription of the mixAA. Complementary molecules may be used to modulate NHLP proteins may be used to blagnostically, the PNS may be used to detect and quantitate gene expression in biopsied tissues in which expression of NHLP may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

length targeted to a nucleic acid molecule encoding lysophospholipes I (II), where (I) specifically hybridises with and inhibits the expression of (II). (I) is useful for inhibiting the expression of (II) in cells or tissues, and for treating a human having a disease or condition associated with Lysophospholipes I e.g. inflammation, hyperlipidaemia, and cardiovascular disorders such as atherosclerosis and myocardial ischaemia. (I) is useful as research reagent and diagnostrics. (I) is also functions of various members of a biological pathway. (I) is useful in antisense gene therapy. AAU85132-AAU85136 represent lysophospholipase I amino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 VILINMIVAMPSWFDIIGLSPDSQEDESGIKQAAENIKALIDQEVKNGIPSNRIILGGFSQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               length targeted to a nucleic acid molecule encoding lysophospholipase I (II), where (I) specifically hybridises with and inhibits the expression of (II) is useful for inhibiting the expression of (II) in cells or tissues, and for treating a human having a disease or condition associated with Lysophospholpase I e.g. inflammation, hyperlipidaemia, and cardiovascular disorders such as atherosclerosis and myocardial ischaemia. (I) is useful as research reagent and disquostics. (I) is also useful in antisense gene therapy. AAU85132-AAU85136 represent lysophospholipase I amino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GGALSLYTALTTQQKLAGVTALSCWLPLRASLPQGPIGGANRDISILQCHGDCDPLVPLM 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                     Novel antisense compound useful for treating inflammation, hyperlipidemia, and cardiovascular disorders such as atherosclerosis and myocardial ischemia, inhibits Lysophospholipase I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                              invention relates to an antisense compound (I) 8-30 nucleobases in

The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in ham54176. To ARR54167 to ARR54167 and interpretation and related anorectic, immunosuppressive, cytostatic, antidabetic, antidifertility, haemostatic, antidiflammatory, anti-HIV, antiasthmatic, metabolic, immunomodulator, neuroprotective, nocropic, antiparthmonian and antilipaemic activities, and can be used in gene therapy. NOVX proteins are useful for treating or preventing a pathology associated with a NOVX protein in humans and for treating a syndrome ansociated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy atherosclerosis, hypertension, congenital heart defects, acrtic stenosis, valve disease, tuberous sclerosis, scleroderma, obesity, transplantation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Agee ML, Alsobrook JP, Anderson DW, Berghs C, Boldog FL;

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, certainty or atlailor variation of the mucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a compound the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal lissue of a first animal subjected to pain, a method for identifying a compound which is differentially expression of a polymucleotide sequence which is differentially expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating continuity in an animal of one or more of the polymetical composition of pain and a pharmaceutical composition comprising the one or more of polypeptides or their antibodies. The polymucleotide or the compound that composition comprising the one or more of pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene the sequence date for this patent did not form part of the printed the sequence date for this patent did not form part of the printed the sequence date for this patent did not form directly from WIPO at the sequence date for this patent did not form directly from WIPO at the specification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a kit increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence which is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynetides or identifying a compound to small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating cativity in an animal of one or more of the polypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more of polypeptides or their antibodies. The polynucleotide or the compound to the polynucleotide or more of polypeptides or their antibodies. The polynucleotide or the compound to the polynucleotide or the sequence presented is a human protein (shown in Table 2 of the rappy). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at cyth. We will not the presented to the printed or the sequence data for this patent did not form part of the printed or the polynucleon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 VTLNMAVAMPSWFDIIGLSPDSQEDESGIKQAAENIKALIDQEVKNGIPSNRIILGGFSQ 120

                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptide polypeptides; expression vectors and host cells comprising a TAT nucleic for a TAT polypeptide; and mathody specific for a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colored cancer, lung cancer, ovarian cancer, liver cancer, because and leukaemia TAT nucleic acids may further be nearged to the cancer, because and leukaemia TAT nucleic acids may further be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0

AAC AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; chuman colon cancer antigens can have cytostatic, cardioactive, muscular; continerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polymucleotides, con be used in gene therapy. The colon cancer antigen polymucleotides, contineration and introduced to the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polymucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent disorders, reproductive disorders, immune system disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders, AAC98764 to AAC98772 and AAB54007 represent cardiovascular disorders, here are also the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MCGNNMSTPLPALVPAARKATAAVIFLHGLGDTGHGWAEAFAGIRSSHIKYICPHAPVRP 60
Colon cancer associated gene sequences, referred to as colon cancer antigens, useful for the treatment, prevention, and diagnosis of colon disorders such as colon cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

(I) is useful as hybridisation probes, polymerase chain and in recombinant production of (II). The polymerase chain and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging polypeptide and polynucleotide sequences have applications in

1 to 42. ACC6226 to ACC62245 encode the human NOVX proteins given in

CC ABR84167 to ABR84276. NOVX sequences have antiatherocal-rotic, cardiant,

CC ABR84167, antianterility, hamoetatic, immunosuppressive, cytostatic,

antidaberic, antianterility, hamoetatic, antiinflammatory, anti-HIV,

cantidaberic, antilinertility, hamoetatic, antiinflammatory, anti-HIV,

contigathmatic, metabolic, immunomodulator, neuroprotective, noctropic,

antidaberic, antilinear activities, and can be used in gene

therapy. NOVX proteins are useful for treating or preventing a pathology

contigation with the human disease. NOVX nucleic acids, proteins and

antibodies can be used in the treatment and diagnosis of cardiomyopathy,

cantibodies can be used in the treatment and diagnosis of cardiomyopathy,

atherosclerosis, hyperthesion, congenital heart defects, aortic stenosis,

valve disease, tuberous sclerosis, scleroderma, obesity, transplantation,

congenital adrenal hyperplasta, prostate cancer, diabetes, metabolic

congenital acternal hyperplasta, prostate cancer, diabetes, metabolic

congenital acternal hyperplasta, prostate cancer, diabetes, metabolic

congenital actennal hyperplasta, prostate cancer, diabetes,

congenital action, idiopathic thrombocytopenic purpura, graft versus host

congenital actions disease, parkinson's disease, immune disorders,

confectious disease, parkinson's disease, immune disorders,

confections disease, parkinson's disease, immune disorders,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              rinx/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CATT/
The invention relates to a novel (NOVX) human polypeptide. A polypeptide of the invention has cardiant, antiarteriosclerotic, hypotensive, cof the invention has cardiant, antiarteriosclerotic, hypotensive, immunosuppressive, dermatological, anorectic, cytostatic, antidiabetic, haemostatic, anti-HIV, antiasthmatic, antibacterial, virucide, corrective, nootropic, antiparkinsonian, and antilipaemic activity.

Chaemostatic, anti-HIV, antiparkinsonian, and antilipaemic activity.

Chaemostatic, anti-HIV, antiparkinsonian, and antilipaemic activity.

A polymucleotide encoding a polypeptide of the invention may have a use consequent threa manufacture of a medicament for treating a syndrome cuseful in the manufacture of a medicament for treating a syndrome cuseful in the manufacture of a medicament for treating a syndrome cuseciated with the polypeptide. These may also be used in diagnosing, treating or preventing NOVA-associated disorders used in diagnosing, catherosciated with properties, associated cardexia, cancer-associated cachexia, neurodegenerative disorders (e.g. Allzheimer's disease or Parkinson's disease), haematopoietic disorders (e.g. Allzheimer's disease or Parkinson's disease), haematopoietic disorders, dyslipidaemias and other wasting disorders associated with chronic diseases. The nucleid cache as also cuseful as vaccines. The present sequence represents a NOVX polypeptide of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 95% identity to 247 amino acids as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidiabetic, anorectic, cerebroprotective, neuroprotective, antidiabetic, anorectic, cerebroprotective, neuroprotective, antidiabetic, any prove useful for gene-therapy or antisense-therapy. The invention may be useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various detection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a human NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

(I) is useful for inhibiting the expression of (II) in cells or tissues, and for treating a human having a disease or condition associated with Lysophospholipase I e.g. inflammation, hyperlipidaemia, and cardiovascular disorders such as atherosclerosis and myocardial ischaemia. (I) is useful as research reagent and diagnostics. (I) is also useful for distinguishing functions of various members of a biological pathway. (I) is useful in antisense gene therapy. AAU85132-AAU85136 represent lysophospholipase I amino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 VTLNMNVAMPSWFDIIGLSPDSQEDESGIKQAAENIKALIDQEVKNGIPSNRIILGGFSQ 120

The invention unserloses a composition with represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a fit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound that regulates the activity of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the payeptides or their antibodies. The polynucleotide or more of more polynucleotide set a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polynucleotide or the compound that method for identifying a medicament for treating a medicament for treating and a pharmaceutical composition comprising the one or more polynected and a pharmaceutical composition comprising the one or more or more polynected activity is useful for preparing a medicament for treating and activity is useful for preparing a medicament for treating and and pharmaceutical composition comprising medicament for treating and and a pharmaceutical composition or more or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGALSLYTALITUQKLAGVTALSCWLPLRASFSQGPINSANRDISVLQCHGDCDPLVPLM 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MCGNNMSTPLPAIVPAARKATAAVIFLHGLGDTGHGWAEAFAGIRSSHIKYICPHAPVRP
